                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAB36341;
The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA segment which encodes a foreign epitope or antigen. Also described are: segmence which aggregative fimbriae (SEFI7/TAF) nucleation depended (I) use of thin aggregative fimbriae (SEFI7/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Farecombinate comprising recombinant Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbria subunits, respectively: (2), AgfA, CsgA and AgfA-homologue fimbria subunits, respectively: (2), homologous species; (3) directing recombination of a recombinant gene into the chromosome of the homologous species, replacing the native back into the chromosome of the homologous species, replacing the native
                                                                                                                                                                                                              Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                comprising separating an amino acid polymer comprising a recombinant of AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonelia, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful consecution an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrian protein possesses both the chmunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong components the inserted epitope, and hybrid fimbriae are easy and consecution of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Best Local Similarity Matches 127; Conserv

The present invention describes a recombinant agfA gene (I) where a CC segment of the gene has been replaced by a segment of a foreign DNA CC segment of the gene has been replaced by a segment of a foreign DNA CC segment of thin aggregative fimbriae (SEFIT/TAP) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and depended CC assembly system of strains of Salmonella, Escherichia coli and combinant CC AgfA, CsgA and AgfA-homologue fimbria subunits, respectively; (2) CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) the chomologous species; (3) directing recombinant gene into the chromosome of the chomologous species, replacing the native back into the chromosome of the homologous species, replacing the native comprising separating an amino acid polymer comprising a recombinant comprising a recombinant comprising a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or a salfa protein containing a replacement segment or segments of foreign cuseful for the expression of recombinant AgfA protein which is useful comprising an immune response in an animal. In a fimbrial presentation cystem the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to combinant the heterologous antigens are protein possesses both the immunogens, which may be important for directing an immune response capainst the inserted epitope, and hybrid fimbria are casally strong consequences which may be important for directing an immune response capainst the inserted epitope, and hybrid fimbriae are easy and consequence is given in the present sequence is given in the protein of the present invention.
                                                                                                                                                                                                                                                                                                                                                      RESULT 6

The present invention describes a recombinant agfA gene (I) where a company of the gene has been replaced by a segment of a foreign DNA company of thin aggregative fimbriae (SEF1/T/TAF) nucleation depended company system of strains of Salmonella, Escherichia coli and company system of strains of Salmonella, Escherichia coli and company system of strains of salmonella, Escherichia coli and company of the production of fimbriae comprising recombinant coli and company of the composition of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene composition of the chromosome of the homologous species, replacing the native comprising separating an amino acid polymer comprising a recombinant comprising separating an amino acid polymer comprising a recombinant comprising sequence or sequences grown on a Salmonella, E. coli or composition containing a replacement segment or segments of foreign containing and admining a replacement segment or segments of foreign containing and and an animal. In a fimbrial presentation containing a segment or segments of the containing and an animal in containing a replacement segment or segments of the containing and an animal in a segment or segment or segme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      05-APR-2000; 2000WO-CA00356
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            White AP,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            N-PSDB; AAC64624
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (UYVI-) UNIV VICTORIA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure;
                                                   against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention.
                                                                                                                                                immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response

                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence represents the Salmonella enteritis 27655-3b TnphoA mutant strain AgfA protein. The encoding DNA and isolated AgfA protein are used in genetic immunization and vaccine compositions, respectively, to elicit an immune response to Salmonella in animals (e.g. food producing animals) and humans.

The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 99% of Salmonella strains that are

The present invention describes a recombinant agfA gene segment of the gene has been replaced by a segment of a

(I) where a foreign DNA

Disclosure; Page 138; 139pp; English.

sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response

immune response in animal

```
Coopy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant of AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or amino acid sequence or sequences grown on a Salmonella, E. coli or contract of the animal in conjunction with a carrier or diluent. (I) is colymer into the animal in conjunction with a carrier or diluent. (I) is conjunction to the expression of recombinant AgfA protein which is useful conjunction with a carrier or diluent. (I) is conjunction to the expression of recombinant AgfA protein which is useful conjunction an eliciting an immune response in an animal. In a fimbrial presentation conjunction to the hybrid fimbrin protein possesses both the compose (vaccine, the carrier fimbrial subunit proteins are usually strong conjunction, which may be important for directing an immune response conjunction the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 10

comprising separating an amino acid polymer comprising a recombinant comprising separating an amino acid polymer comprising a recombinant comparising acid sequence or sequences grown on a Salmonella, E. coll or comprising a recombinant comprising a recombinant. (I) is comprised for the expression of recombinant against in a fimbrial presentation comprising an immune response in an animal. In a fimbrial presentation comprised comprises/cell), the hybrid fimbrin protein possesses both the comprise comprises/cell), the hybrid fimbrin protein possesses both the comprise comprises relevant for an efficient live immunogens, which may be important for directing an immune response comprises the inserted epitope, and hybrid fimbriae are easy and comprised to purify in large amount. The present sequence is given in compensive to purify in large amount. The present sequence is given in compressive to purify in a present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEPI7/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of salmonella, Escherichia coli and AgfA, CsgA and AgfA-homologue fimbriae subunits, respectively; (2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure; Page 139; 139pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                back into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene
                                                                exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and the exemplification of the present sequence is given in the present sequence is given in

                                                                               В
                                                                                                                   Ωy
                                                                                                                                                                                                                                             cc directing recombination of a recombinant gene into the chromosome of the chomologous species; (3) directing recombination of a recombinant gene back into the chromosome of the homologous species, replacing the native cc back into the chromosome of the homologous species, replacing the native cc copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign camino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the colymer into the animal in conjunction with a carrier or diluent. (1) is cuseful for the expression of recombinant AgfA protein which is useful cor eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are bresented in high numbers (up to 500,000 copies/cell), the hybrid fimbrial protein possesses both the carrier fimbrial subunit proteins are usually strong the immunogenes which may be imported for the subunit proteins are usually strong.
                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichla coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
                                                                                                                                                                                                                                                                                                   immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2000-672631/65.

cc segment of the gene has been replaced by a segment of a foreign DNA cc sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended cc assembly system of strains of Salmonella, Escherichia coli and cd interobacteriaceae for the production of fimbriae comprising recombinant cc AgfA, CsgA and AgfA-homologue fimbria subunits, respectively: (2) cc AgfA, CsgA and AgfA-homologue fimbria subunits, respectively: (2) cc AgfA, CsgA and the chromosome of the fimbriae comprising recombinant cc copy of that gene; and (4) eliciting an immune response in an animal, cc comprising separating an amino acid polymer comprising a recombinant cc apida protein containing a replacement segment or segments of foreign cc AgfA protein containing a replacement segment or segments of foreign cc polymer into the animal in conjunction with a carrier or diluent. (1) is coll greateful for the expression of recombinant AgfA protein which is useful cc system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrian protein possesses both the cc immunogenicity and adhesion properties relevant for an efficient live capainst the inserted epitope, and hybrid fimbriae are easy and consensive to purify in large amount. The present sequence is given in the hybrid fimbriae are easy and consensive to purify in large amount. The present sequence is given in the memphisication of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              26-FEB-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a recombinant agfA gene (1) where a segment of the gene has been replaced by a segment of a foreign DNA segment which encodes a foreign epitope or antigen. Also described are: sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEFI7/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of salmonella, Escherichia coli and assembly system of the production of fimbriae comprising recombinant Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbria subunits, respectively; (2) AgfA, CsgA and AgfA-homologue fambria subunits the chromosome of the directing recombinant gene into the chromosome of the homologous species; (3) directing recombinant on of a recombinant gene homologous species; (3) directing recombinant on of a recombinant gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   vaccine; immune response; immunogen
                                                                                                                                           comprising separating an amino acid polymer comprising separating an amino acid polymer copy of the acid sequence of the host cell, from the patient of the mative comprising separating an amino acid polymer comprising a recombinant comprising separating an amino acid polymer comprising a recombinant agif protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or amino acid sequence or sequences grown on a Salmonella, E. coli or control the animal in conjunction with a carrier or diluent. (I) is polymer into the animal in conjunction with a carrier or diluent. (I) is golymer into the expression of recombinant AgfA protein which is useful useful for the expression of recombinant AgfA protein which is useful useful for eliciting an immune response in an animal. In a fimbrial presentation for eliciting an immune response in an animal. In a finbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong the protein and the carrier fimbrial subunit proteins are usually strong the immunogens, which may be immortant for directing an immune response
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Recombinant agfA gene having a segment replaced by a foreign DNA seguence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     White AP,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        05-APR-1999;

                     CC copy of that gene; and (4) eliciting an immune response in an animal, CC comprising separating an amino acid polymer comprising a recombinant CC AgfA protein containing a replacement segment or segments of foreign CC amino acid sequence or sequences grown on a Salmonella, E. coli or CC enterobacteriaceae host cell, from the host cell and introducing the CC polymer into the animal in conjunction with a carrier or diluent. (I) is CC useful for the expression of recombinant AgfA protein which is useful CC for eliciting an immune response in an animal. In a fimbrial presentation CC system the heterologous antigens are presented in high numbers (up to CC 500,000 copies/cell), the hybrid fimbria protein possesses both the CC ummunogens, which may be important for directing an immune response CC against the inserted epitope, and hybrid fimbriae are easy and CC inexpensive to purify in large amount. The present sequence is given in
                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal
                                                                                                                                                                                                                                                                                                 back into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal,
                                                                                                                                                                                                                                                                                                                                       directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 2000-672631/65.

            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score

"Global GacA-steered control of secondary metabolism in Pseudomonas fluorescens acts on specific ribosome binding sites.";

Submitted (MAR-1999) to the EMBL/GenBank/DDBJ databases.

-I- FUNCTION: THIS PROTEIN BINDS DIRECTICY TO 23S RIBOSOMAL RNA AND IS NECESSARY TO THE IN VITRO ASSEMBLY PROCESS OF THE 50S RIBOSOMAL SUBUNIT; IT IS NOT INVOLVED IN THE PROTEIN SYNTHESIZING FUNCTIONS OF THAT SUBUNIT (BY SIMILARITY).

OF THAT SUBUNIT (BY SIMILARITY).
